

Write an algorithm which will insert a node at the beginning of singly linked list

09 August 2020 21:02

```
InsertatBegin(start, avail , item)
if avail=null
print overflow
exit
end if
save<-avail
avail<-link->avail
if start =null
start<-save
data->start<-item
link->start<-null
exit
end if
ptr<-start
start<-save
data->start<-item
link->starts ptr
end
```
